

# Containerized Waste

CIRCON accepts hazardous and non-hazardous materials for on-site services including lab packing, container labeling, sampling, transport, treatment, and final safe disposal.

## A Better Way to

- RECOVER
- RECYCLE
- REPURPOSE
- RESULTS

We recover waste, including (but not limited to) organics, fuels, oils, and glycols, from a variety of industry operations.

We recycle rags, oily debris, filters, used oils, metals, and plastics, and use them as components of CIRCON's blended fuels.

Those fuels are then used to power cement kilns or other energy-generating sites

# 50,000

50,000 DRUMS OF WASTE MANAGED OVER THE LAST 5 YEARS.

## How We Move

We own and operate a fleet of trucks custom-designed to safely move materials to our designated facilities; our dedicated team takes the hassle out of your freight handling.

## CIRCON Box: Efficiency

An innovative solution using more horsepower, less manpower

The ultimate mobile solution for creating waste-blended fuel. The CIRCON Box is a double-walled container designed with our patented agitation system. Tried, tested, and true, this unit delivers value for a myriad of applications.

## Details

We can manage a variety of wastes: hazardous, non-hazardous, solid, and liquid. We'll work with you to create a custom disposal or recycling plan, delivered with world-class service.

### Comprehensive solutions

With just one phone call, our team of waste-management specialists can help you build cost-effective solutions to profiling, manifesting, placarding, labeling, and transportation. If CIRCON can't perform a specific service at one of our own locations, we can utilize our network of approved and trusted third-party disposal facilities.

### Lab packs

Our staffers have decades of experience in the categorizing, inventorying, and packing of lab packs. We're thorough, accurate, meticulous, and responsible.

### On-site services

CIRCON can provide a full- or part-time technician to manage your wastes and residual materials on-site. While others may push to feed their own incinerator or landfill, we're focused on finding an efficient solution that suits your philosophy. We can provide recycling, incineration, landfill disposal, wastewater treatment, deep-well injection, fuel blending, or reclassification.

## Where We Work

### Bay Park

Just five miles from the Houston Ship Channel, our RCRA Part B-permitted facility provides containerized waste treatment, storage, and disposal.
