

Petrochemical Product Recovery & Trading

A Better Way to a Greener Tomorrow

CIRCON turns off-spec, off-test, and production overrun petrochemical products into valuable components of our blended fuels, creating market value and avoiding any waste designation.

Our Numbers Show It.*

4MM

4 MILLION BARRELS OF PRODUCTS BLENDED AND SOLD

*Statistic is measured over the last five years.

A Better Way to

- RECOVER
- RECYCLE
- REPURPOSE
- RESULTS

We acquire off-spec and off-test petrochemical products with reduced or no value.

These difficult-to-manage products become part of our proprietary fuel-blending system and production.

The majority of our fuel-blended products will have an end use for power generation in the industrial sector; we can also assist in placing product streams into specialty or secondary chemical markets.

4 MILLION BARRELS OF PRODUCT BLENDED AND SOLD IN THE LAST FIVE YEARS

How We Move

CIRCON can accept feedstocks by truck, rail, and barge—or provide transportation to move your materials.

Details

We stand out in a competitive field. And we're here to help you do the same.

Our personal commitment

CIRCON's operations consist of over 100,000 barrels of storage and blending capabilities. And because they're handled at our on-site laboratories by our expert and dedicated team, you can trust that all materials have been safely and responsibly tested and qualified before they're blended.

A strategic advantage

Our unique blending services mean CIRCON can provide solutions to difficult-to-manage products and co-products, solutions that may be overlooked by competitors. Pour point, water, ash, flash, solids, sulfur, and handling difficulties are no problem for us. Plus, we can offer permanent homes for problematic streams.

Added value

We blend a broad range of refinery and petrochemical products from various markets in our fuel oil blending program, which helps power the industrial sector. Products accepted include but are not limited to:

- Fuel oil blend stocks
- Off-test refinery and petrochemical products
- Pulp and paper products, tall oil, terpenes
- Heavy alcohols
- Vacuum gas oil
- Olefins

Products we regularly have in inventory and can handle on a term or spot basis include:

- Off-spec, expired, or adulterated streams
- Raffinates, naphthas, gasoline
- Chemical co-products
- Tank flush, excess inventories
- Aromatic hydrocarbons
- Aliphatic hydrocarbons

Where We Work

Marine Terminal

Located in the Port of Houston on the Ship Channel, our Marine Terminal facility has the capacity to load from 10,000- to 20,000-barrel parcels via barge. We also lease more than 80,000 barrels of tankage at the Houston Fuel Oil Terminal and can load or deliver vessels to end users via internal tank transfer.
